August 10, 2026

We are pleased to announce that due to the tremendous success of Digital Voice Stress Analyzer (DVSA) both nationally and internationally, the GLENDALE POLICE DEPARTMENT will be hosting a 5-day Law Enforcement Truth Verification Examiner Course the week of October 19, 2026. Your agency is invited to participate. Recertification day is Thursday of that week for previously trained examiners.

Glendale PD has successfully used DVSA for one year. Over 5000 law enforcement, corrections, and government agencies throughout the U.S. are successfully utilizing VSA. U.S. Government users include U.S. Air Force, National Law Enforcement and Corrections Technology Center, National White Collar Crime Center, Sandia National Laboratory where most of the U. S. nuclear arsenal is developed, Department of Energy, and government contractors. The course and instructors are certified by the International Society of Stress Analysts, and American Polygraph and Voice Stress Association. Training is P.O.S.T. certified / accepted for credit in IL, IN, LA, GA, TN and agency certified in other States.

FREE DVSA software will be provided to participating agencies through Criminal Justice Grants provided by Baker Group International, a \$9950.00 value for each copy. DVSA software installs on currently owned computer laptops thus saving precious resources. Graduates will be able to conduct truth verification examinations with ease regarding criminal matters, internal affairs, intelligence, counterintelligence, and pre-employment / selection. Your cost is only \$1995.00 for course tuition and \$350.00 annual one-day advanced re-certification thereafter.

DVSA is non-invasive, fast, reliable, cost effective, and easy to use. DVSA can be used overtly or covertly, via telephone, Zoom, etc. Unlike polygraph, drugs, alcohol, and medical issues do not affect DVSA, there are no known countermeasures, and no “inconclusive” results

associated with polygraph. Cold cases are easily resurrected by deception analysis of old audio-recorded interviews.

Voice Stress Analysis has been instrumental in solving an extensive list of major cases. It outperforms any other detection or deception method. This technologically advanced DVSA is the most effective investigative tool to be introduced into the law enforcement community since the invention of polygraph. DVSA is far superior to CVSA, AVSA, VIPER, LVA, and polygraph.

DVSA requires no attachment to the subject being evaluated. DVSA uses only a microphone and computer to capture and display the subject's verbal responses. After proprietary algorithmic

calculations and filtering, resulting voice patterns are numbered, saved, and displayed on-screen for examiner analysis, AI validation and chart printing.

The DVSA accurately gets to the truth. According to US Air Force Research Laboratory, Rome NY, "BAKER DVSA... is fast and accurate." With the peer reviewed US DOJ / USAF study validating the accuracy of VSA at 100% utilizing the Baker chart analysis criteria and stress pattern quantifications.

E. Gary Baker, PhD, developer, and course instructor is a true pioneer of VSA, practicing since 1974 and polygraph since 1986. He has conducted over 10,000 examinations. His VSA methods and protocols have been accepted by the U.S. government agency for nuclear power station applicants. He introduced VSA techniques into the US / Colombia anti-terrorism and war on drugs, South Africa National Police, Indonesia Military Intelligence, and Malaysia National Police. Baker instructed analysts and engineers of the Air Force Research Laboratory - Law Enforcement Analysis Facility, N.I.J - National Law Enforcement and Corrections Technology Center, and at Sandia National Laboratories where most of the U.S. nuclear arsenal is developed. DVSA Remote Analysis is successfully used in combat zones for vetting local and third country nationals for sensitive and high security positions of trust.

**RESTRICTED ATTENDANCE:** Participants must be law enforcement investigators, arson investigators, District Attorney / State Prosecutor Investigators, State regulatory agency investigators, or government agents.
